

# The Milky Way

# The 500 Rule

Here's the 500 Rule: 500 Divided By the Focal Length of Your Lens = The Longest Exposure (in Seconds) Before Stars Start to "Trail" For example; let's say you're taking a shot with a 24mm lens on a full frame camera.  $500 / 24 = 21$  seconds, which you can round to 20 seconds.
